WARNING

- The welding helmet lens is breakable and does not provide complete protection from flying particles, severe impact hazards and/or corrosive liquids.

Wear ANSI approved safety goggles.

Flying particles can cause eye or other bodily injuries.

- An auto-darkening welding helmet may fail to automatically darken upon striking an arc or lighting a gas torch.

Stop the welding or cutting process immediately. Contact your Snap-on representative for repairs. Do not attempt to repair the welding helmet yourself.

Welding without a darkened welding lens causes ultraviolet rays to burn the eyes.

Read additional safety warnings on pages W1 to W4 in Catalog 1200
